Ex.no 13 Implement your own ping program

Code:

```
import os
import platform
import subprocess

def ping(host = "google.com", count = 4):
    param = "-n" if platform.system().lower()
            == "windows" else "-c"

    command = ["ping", param, str(count), host]

    try:
        output = subprocess.check_output(command,
                 universal_newlines = True)
        print(output)
    except Exception as e:
        print(f"ping failed: {e}")

if __name__ == "__main__":
    ping("8.8.8.8")
```

Output:

```
Pinging 8.8.8.8 with 32 bytes of data:
Reply from 8.8.8.8: bytes = 32 time = 6ms
                    TTL = 119
Reply from 8.8.8.8: bytes = 32 time = 9ms
                    TTL = 119
Reply from 8.8.8.8: bytes = 32 time = 5ms
                    TTL = 119
Reply from 8.8.8.8: bytes = 32, time = 9ms
                    TTL = 119
```

Ping statistics for 8.8.8.8:

Packets: Sent = 4, Recieved = 4, Lost = 0

(0% loss)

Approximate round trip times in milli-seconds:

Minimum = 5ms, Maximum = 9ms, Average = 7ms

Output:

Thus, the ping program is implemented using python code.
