10.8.26

Experiment - 5
Capture Tool - WireShark

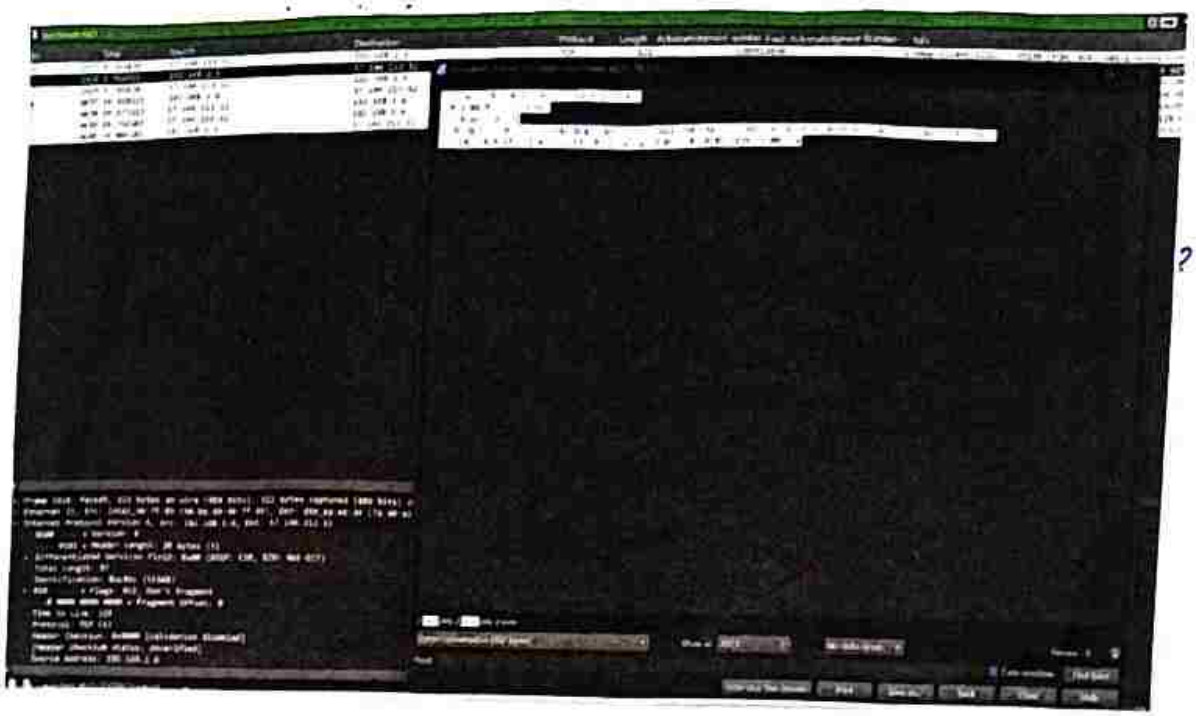

Aim:
Experiment on packet capture tool wireshark.

Packet Sniffer:
* sniffs messages being sent / received from / by your computer.
* store and display the contents of the various protocol fields in the message.
* Passive program
  i) Never sends packets itself
  ii) No packets add to it
  iii) Receivers a copy of all packets (sent/received)

Packet Sniffer Structure Diagnostic tool.
* Tcpdump - Eg: tcpdump - enx host 10.129:41.2 - w exe 3. out
* Wireshark - Wireshark - r exe 3. out

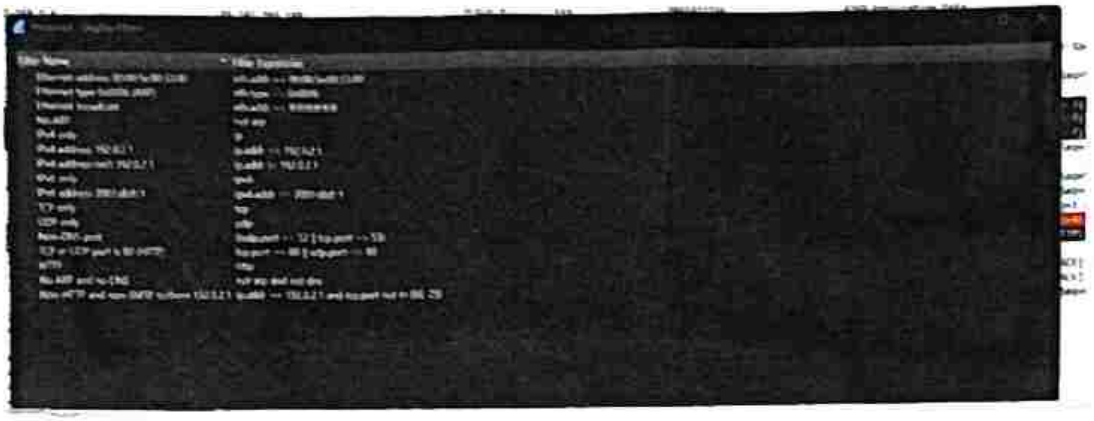

Procedure:
* Select the local area connection in wireshark.
* Go to capture option
* Select capture and stop automatically after 100 packets
* Then click start capture
* Save packets.

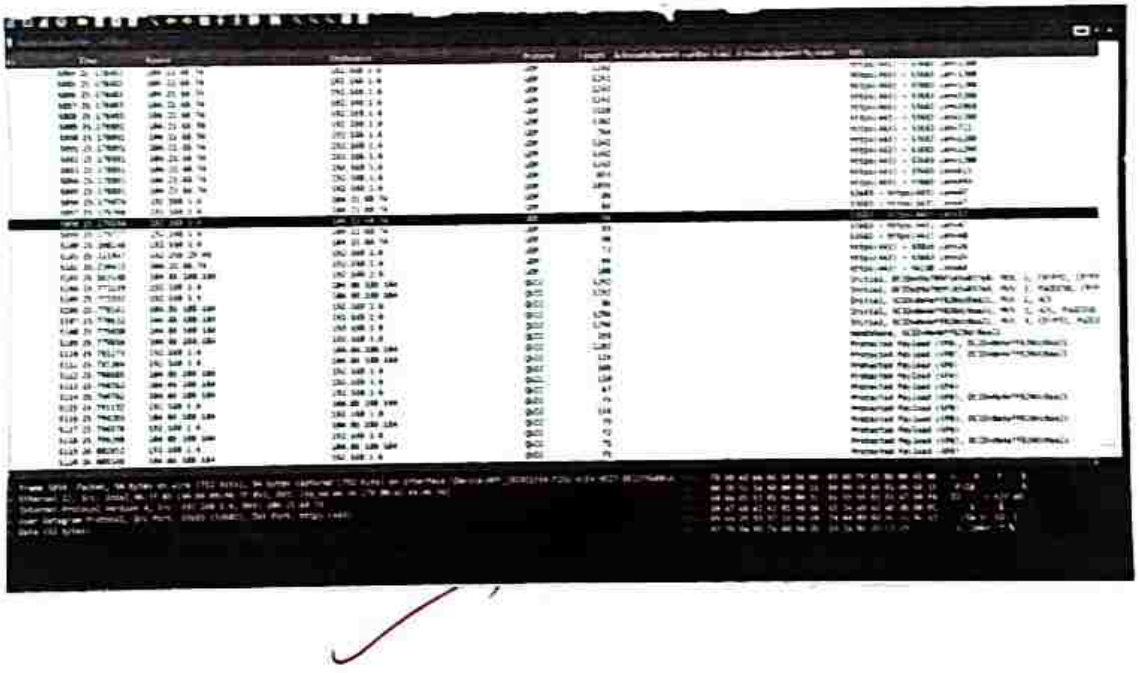

i) Create a filter to display only TCP/UDP packets, inspect and provide the flow graph.
* Go to search bar at the top of the tool
* Search TCP packets inspect the packets and provide the in search bar
* To see the graph click statistics flow graph
* Save the packets.

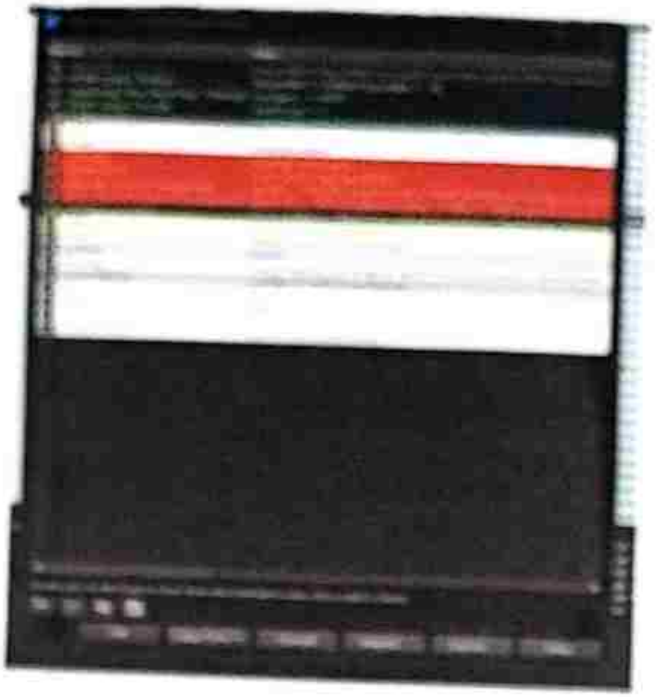

ii) Create a filter for ARP packets
   * Go to search option
   * Search ARP packet in search bar
   * Save the packets

iii) Creating a filter to display DNS packets and provide the flow graph.

iv) Creating a filter for ICMP and DHCP packets and inspect & show the packets.

v) Create filter for ICMP and DHCP packets and inspect & show the packets.

Result:
Wireshark helps us in analysing & understanding our network traffic and packet flow through various filters & flow graphs
